

Tibial Tubercle Osteotomy + MPFL Reconstruction Protocol

	WEIGHTBEARING	BRACE	ROM	EXERCISES
PHASEI	Flat foot only	On at all times	0-1 week: 0-45°	Calf pumps, quad sets
0-2 weeks		during day and		
		while sleeping	1-2 weeks: 0-90°	SLR in brace, modalities
		Off for hygiene		
		and exercises		
PHASEII	Flat foot only	Off at night (only	Maintain full	Progress non-weight bearing
2-6 weeks		if the patient has	extension and	flexibility
		obtained full	progress flexion	
		extension)		Begin floor-based core, hip and
		0 0 00%		glutes
		Open 0-90°		Advance and a decided
				Advance quad sets, pat mobs,
PHASEIII	Advance 25%	M/s an acceptance	Full	and SLR
6-8 weeks	weekly and progress	Wean away when full quad control	Full	Advance closed chain quads,
0-8 Weeks	to full with	with ambulation		progress balance, core/pelvic and stability work
	normalized gait	With ambulation		and stability work
	pattern			Begin stationary bike at 6 weeks
	pattern			begin stationary bike at 0 weeks
				Advance SLR, floor-based
				exercises, hip/core
PHASEIV	Full	None	Full	Progress flexibility and
8-16 weeks	-			strengthening, progression of
				functional balance, core, glutes
				program
				Advance bike after 12 weeks
				Outdoor cycling, elliptical,
				swimming after 12 weeks
PHASEV	Full	None	Full	Maximize single leg dynamic
16-24				and static balance
weeks				
				Glutes/pelvic stability/core +
				closed-chain quad program and
				HEP independent
				Begin training sport-specific
				drills as tolerated after 16
				weeks once cleared by MD
